

Appendix H: High Hazard Dam Supplemental Information

This appendix contains supplemental information collected to support the risk assessment for High Hazard Potential Dams in the planning region. It contains the following:

- RAPT Model Outputs
- Dam Safety Data Sheets provided by DCR
- Inundation Maps for
 - Beaverdam
 - Carvin Cove
 - Falling Creek
 - Johns Creek 1
 - Johns Creek 2
 - Johns Creek 3
 - Johns Creek 4
 - Spring Hollow

Where gaps in data exist, the RAPT tool has been used to estimate possible impacts. Inundation mapping is superior to a RAPT model, and including inundation mapping for all High Hazard Potential Dams is an aspirational goal of a future planning process. Two outputs were chosen for the RAPT Model output tables. These included vulnerable populations and facilities.

This appendix, with the exception of this summary, will be redacted in the public plan due to privacy concerns.
